Abstract:

Along with surgical procedures many parasurgical procedures have been explained in sushrutasamhita. Jalaukavacharana is one among parasurgical procedure in which blood vitiated with pitta is removed from body. It is practiced since ancient times to treat Netrarogas. Jalaukavacharana has the property to subside the pain, swelling, burning sensation and redness immediately. Nowadays environment being highly polluted there is increased chances of infections in the eyes. Prevalance of eye diseases is very high. The frequently encountered inflammatory conditions of eye are conjunctivitis, stye and blepharitis which is correlated to abhishyanda explained by Acharya sushrutha. It is prime cause for sarvanetrarogas. In modern science antibiotics is the line of treatment in all the inflammatory eye diseases, where long term administration is needed associated with adverse effects. Jalaukavcharana is free of side effects, cheaper, easier, convenient method, prevent the recurrence of disease and has a significant effect in relieving the symptoms of the patients.
